A lot more of my experience fell under "accountability" than I would have expected

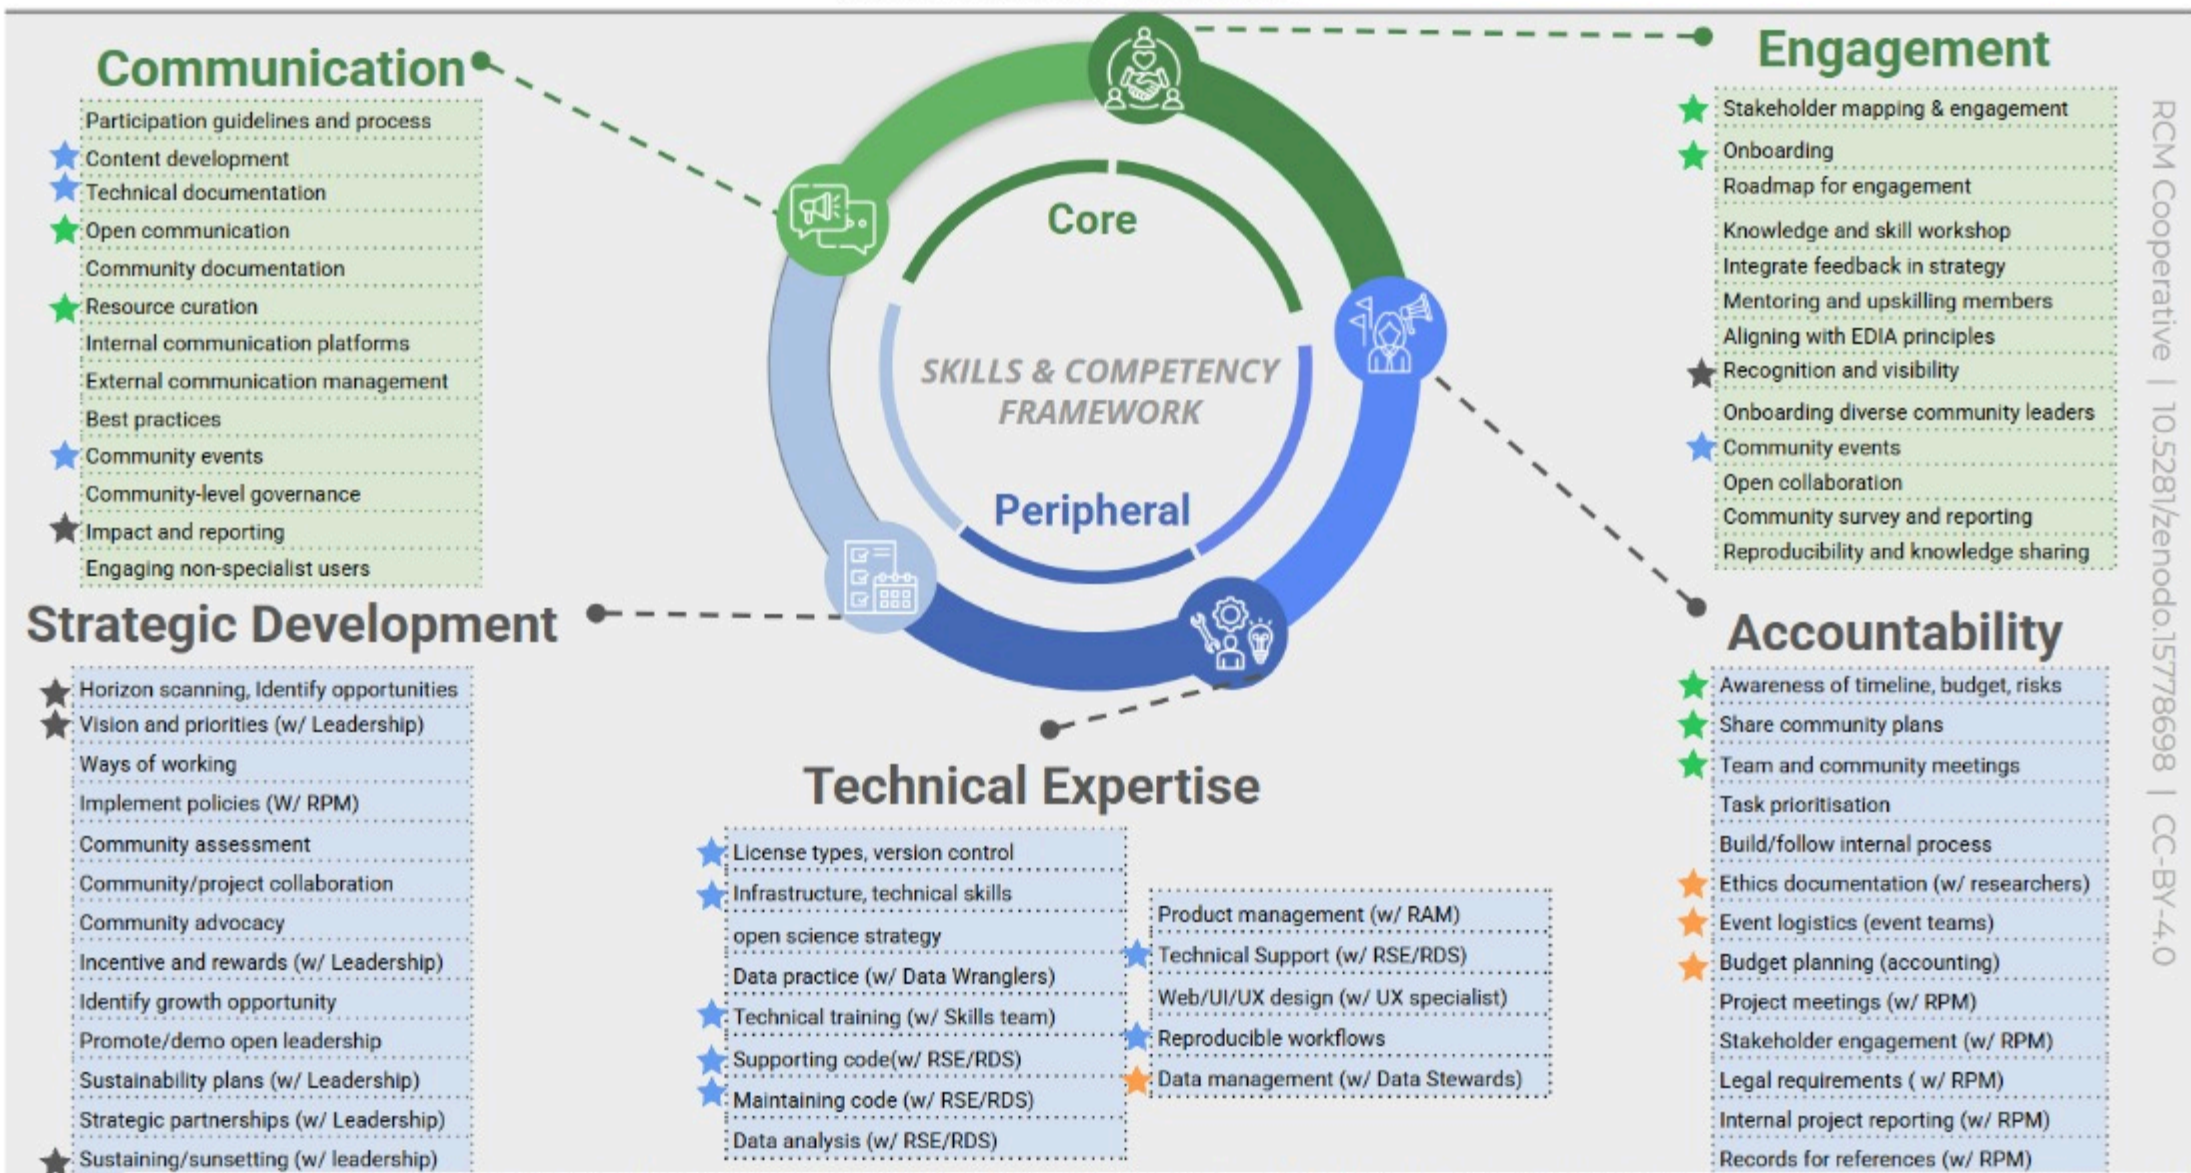

For #4, I focused on what I need to upskill since I'm relatively new to the RSE community and don't know where those areas are yet.

Difference between "skills I have" and resources that are "technically available, but take lots of time to get up to speed with"

I'm curious how accountability works with something as amorphous as a community? Accountable to who?

My sense is most RCM follow the researcher->RCM path. How might these skills be different for folks coming to research with community experience, but not domain expertise?

We have lists and use spreadsheets to document those interested in what we're trying to build.

It would be critical to understand what domains and roles our community is from to understand what they're particularly looking for.

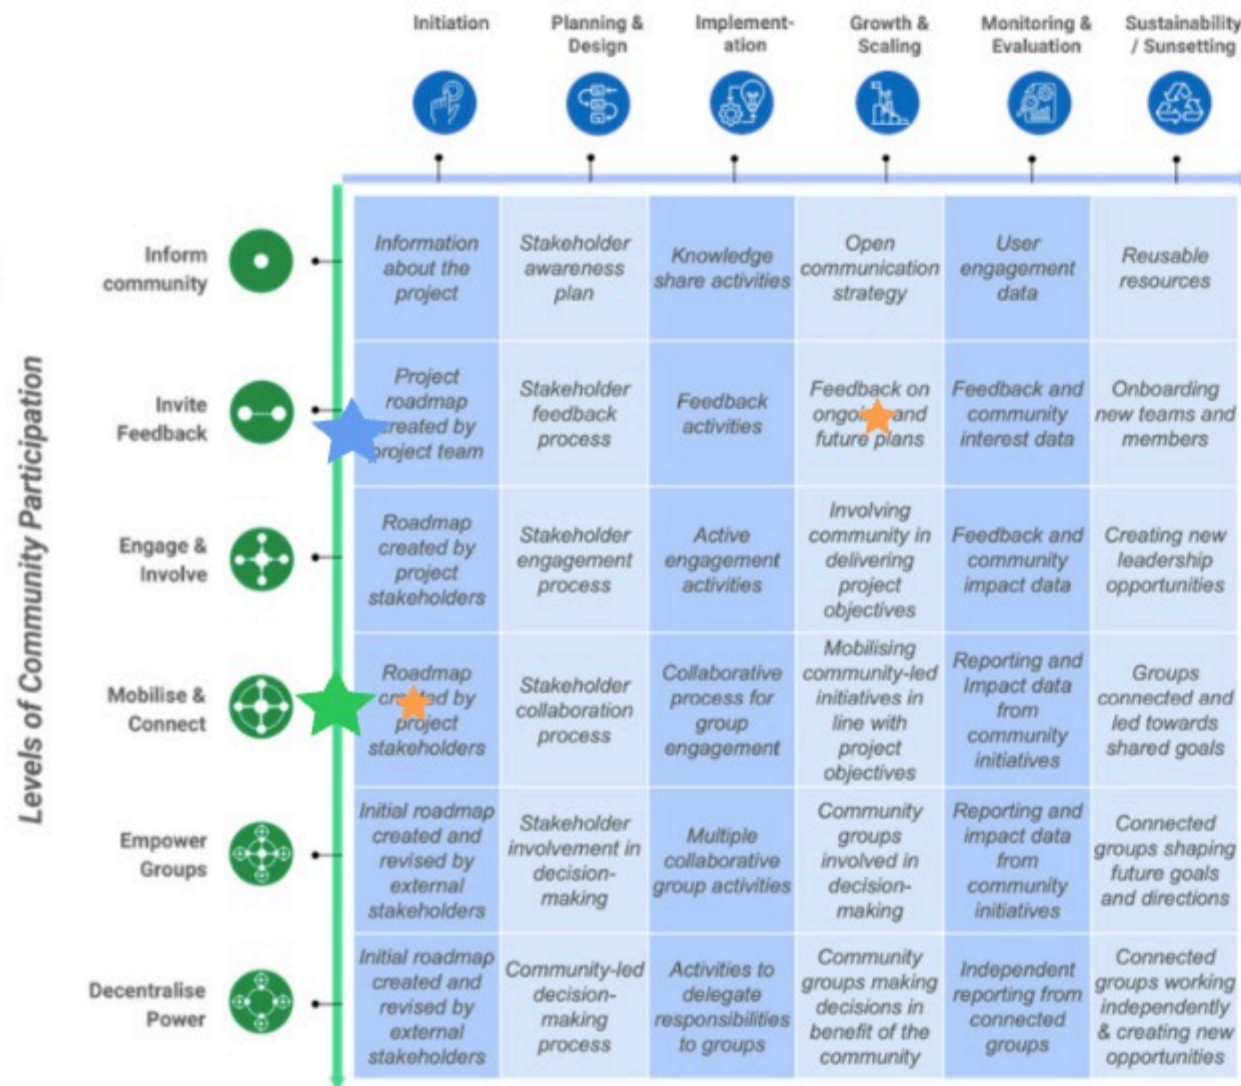

Most of the more active members of the community know the lead personally.

Engagement happens most organically when it's about the scheme, because it's more concrete and there is a goal to be achieved (i.e. certification).

Since we're still very much in the early stages, we haven't thought much about a leadership pipeline.

Desired level of participation is L4 mobilise - need to get more complex to do more and more power to the people.

Currently 12 person committee who are engaged but probably 4/5 actually do most of the work

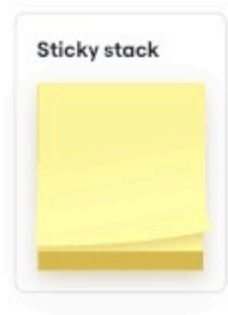

Growth and scaling needed at the moment - revisiting governance will help with this.

also want to increase numbers from the community that can lead work

✍️ What are you going to do next?

New grid

	Low cost	High cost
High Impact	Quick wins - Prioritise these now Verbalise and codify our mission. Reiterate to our community members what we want to achieve. Map our existing community members. - Where are they from? - What domains do they operate in? - What roles do they fill in their institutions? - What are they particularly looking for? Ask ourselves: are we happy with these demographics? Do we want to move further into these, or do we want to expand into other domains, geographies, etc.? Understand the channels in which we get the word out. Do we do more of this? Do we change channels?	Long term projects - Plan and budget carefully Lay out a high-level timeline of milestones to achieve to help us come closer to our mission Experiment on activities based on the generic areas of interest of our community (e.g. training materials/workshops, meet ups)
Low impact	Low risk experiments - Test if you have time Gather data on metrics for newsletter and social media activity? Check data gathered 2 years ago on what platforms the community members prefer to engage and look into why	Avoid - Low value, high drain
